

BE SAFE AROUND ELECTRICITY WHEN MOVING FARM EQUIPMENT

WITH THE ARRIVAL OF HARVEST TIME, INDIANA'S FARMERS ARE SHIFTING INTO HIGH GEAR AS THEY MOVE INTO THEIR FIELDS TO BRING IN CROPS.

All that increased activity puts farmers and farm workers at greater risk.

Always look up and around before moving or raising equipment. A good rule of thumb is to stay at least 10 feet from all power lines and power poles.

Watch out for power poles, too. If you strike one, it may break, dropping a live line on your equipment.

If you're in equipment that touches power lines, stay inside and call for help. If you have to escape, jump clear of the equipment. Keep both feet together and shuffle or hop at least 30 feet away.

Do you hog the bathroom? According to a YouGov survey, 38% of women and 21% of men spend more than 30 minutes each day getting ready. That is 7.6 days spent in the bathroom each year, people.

Do not underestimate the potential for electrical hazards in your house's smallest room. **To stay safe while priming or getting clean:**

1. Ensure ground fault circuit interrupters (GFCIs) are installed and working properly.

2. Use all electrical appliances away from the sink, tub, toilet and shower.

3. Make sure cords and electrical items are in good condition.

4. Do not extend a cord's reach to use a cell phone (or another device) near the tub or shower.

5. Do not plug too many things into an outlet or circuit.

6. Ensure light fixtures in the shower are covered and exhaust fans are free from lint, dirt and grime.

7. Make sure your bathroom meets local and National Electrical Code requirements.
