

# BOATING SAFETY

Stay safe when setting sail this summer

## Safety First

Don't get in the water if your boat accidentally comes in contact with a power line. Stay on board, and don't touch anything made of metal. Don't leave the boat until it has moved away from the power line. The water could be electrified if you notice a tingling sensation while swimming. Get out quickly, avoiding metal objects like ladders.

# SWIMMING SAFETY

Soak up the sun and water but avoid the shock

## Be Aware

It's easy to hop out of the pool and not think of splashing nearby electrical appliances. But doing so can be dangerous. Instead, use battery-operated appliances.

## Safety First

If someone in the pool feels electricity — almost like a stinging feeling — or appears to have been shocked, do not dive in because you could be shocked, too. Instead, turn off the power and use a non-metal shepherd's hook to pull them out of the water.
