

Beautifying your **BIG GREEN BOX**

Pad-mounted transformers, or “big green boxes,” are essential for providing electricity in neighborhoods. Line crews need clearance to work on these high-voltage units. While these boxes can make landscaping tricky, consider these five tips to beautify your yard without causing service disruptions.

1

Mulch & Decorative Rock Beds

Mulch, pea gravel, or river rocks will add texture while keeping the area clean.

2

Potted Plants on Rolling Stands

It's a pretty touch — easy to move for maintenance access and can be updated seasonally.

3

Perennials That Offer Height

Plant flowers with shorter roots like Black-Eyed Susans, Daylilies, Hostas, and Coneflowers.

4

Groundcover Plants

Creeping Thyme or Ajuga for low-maintenance greenery.

5

Avoid These Plants

Bushes, trees, woody plants, and ornamental grass will need to be transplanted, which can result in extended outages.
