

June 2, 2021

Dear Member,

Beginning **June 14, 2021**, Hendricks Power will be performing maintenance on underground electrical equipment in your location. This equipment includes electrical boxes and pad-mounted transformers that may be located around your property.

During this routine maintenance, it is imperative that our crews can access your electrical equipment, so it needs to be clear of any objects or landscaping. Our crews require at least 8-foot clearance at the opening side of pad-mounted transformers and approximately four feet of open space at the rear and on the sides of the metal housing.

**We ask members to remove any fences, ornamental grasses, shrubs/trees, artificial boulders, etc. in this area prior to June 14. If our crews are not able to access equipment, we may be forced to remove obstructions that remain to ensure reliable service.** Please note, our crews will not be responsible to clear any remaining debris.

If you find that you have an overgrown shrub or tree near your transformer, be sure to call 811 prior to digging and transplanting. Digging near transformers is very dangerous and can result in injury and/or an interruption in service.

If you have questions about what may or may not be allowed near your transformer, please give us a call at (317) 745-5473 or visit us online at [www.hendrickspower.com/UGMaintenance](http://www.hendrickspower.com/UGMaintenance).

As always, thank you for being a Hendricks Power member and we appreciate you!
