You can receive an alert to monitor your electric usage

SmartHub is such a convenient tool for our members. Most users already know that you can use it to securely pay your bill online or through your mobile app. But there are many other features that members may be overlooking!

Power Usage Alert

You have the ability to monitor and manage your energy use. Do you want to be notified when your daily usage exceeds a specific amount? Log in to your account (or create one) and click on Notifications>Usage>Power Usage Alert. You can then set your thresholds and select your communication preferences.

Having access to this information could help you make real-life changes to the way you use electricity and ultimately what you pay every month. You can always call us if you have concerns.

My Usage

The My Usage section of SmartHub provides tools to help you analyze your past and current usage, as well as plan for the future. Plus, you can use this data to help you determine alert thresholds.

- *Average Usage:* See your typical electricity use for a specific time period to discover when you use the most electricity.
- *Usage Explorer:* Get a detailed look at past and current usage. You can look at your usage by month, day and hour.
- *Usage Comparison:* Compare two bills worth of electricity usage side-by-side.
- *Weather Overlay:* See how your electricity use changes with the temperature.
